Curriculum Focal Points are:

- Framework of critical areas of mathematics instruction
- A mathematical theme, not a single TEKS statement

Before writing assessments, it is important to:

- Analyze the focal point description to identify key target skills
- Analyze related TEKS statements
- Synthesize the overlaying skills

8. "#)%%&7".&(./#&34+/' 0&+D)&5"' +)' +&"7&4' &
,+) * &+D. "\$0D&@" " <3)60)&.)2.)%)' +4+/"' %&

- Become familiar with the TEKS standard (content standard) for which you are writing a test item
- Articulate the **TARGET SKILLS**
- Articulate the **FOUNDATIONAL SKILLS**
- Articulate the **BRIDGING SKILLS**

Easy

- Basic Knowledge
- Skills that are familiar to students
- Sometimes conceptually based

Medium

Difficult

- Skills that are peripheral to curriculum
- Not all students will have mastered these

(Cheng, 2005)

,+) * &G4+#D&

- In your packet of materials is a 4 x 3 matrix with the 4 strands of mathematical proficiency along the top and 3 levels of difficulty along the left side.
- Take a blue set of cards. They should have a number in the corner, ranging from 1 to 12.
- As you read each item, determine the strand of mathematical proficiency and relative level of difficulty.
- Write the number associated with the item in the appropriate cell.

Assessment Item Development

=) % 2''' %) & 9) P) 3'' 2 *) ' + &

- Make all distractors plausible.
 - If you're interested in obtaining more information about students' understanding, create distractors that represent common misconceptions they may have about the content being assessed
- Keep all options in an item homogenous in content and grammatical structure.
- Keep the length of options brief and fairly consistent.
- Phrase options positively, not negatively.

Two drivers arrived at the park. The park booklet at the entrance
recommended that visitors arrive at the park at 10:00 a.m. to
avoid the heat of the day. The park is open from 8:00 a.m. to 6:00 p.m.
The first driver arrived at the park at 10:00 a.m. The second driver
arrived at the park at 12:00 p.m. The first driver stayed at the park
until 4:00 p.m. The second driver stayed at the park until 6:00 p.m.
The first driver drove home at 4:00 p.m. The second driver
drove home at 6:00 p.m.

A. 10:00 a.m. B. 12:00 p.m.
C. 8:00 a.m. D. 6:00 p.m.

Teachers should agree to analyze the assessments around the same set of criteria. The decisions should be directed toward:

Validation about the appropriateness of the assessment

Ensuring the assessment is congruent to the stated mastery objective and/or state or district standards

Consistency of opinion about the assessment and evaluation of the work

Adjustments in teacher directions and support for all students

Data-Driven Decision Making

?D" \$36&,&B" \&

Now it's time to consider the **BIG** question .

Do I need to look at the data this closely
for **every** student in my classroom?

Our response .

Probably not. For students who are on track, monitoring their progress using the overall score is probably enough. For students

? " *) & ! / ' 4 3 & 1 D " \$ 0 D + % &] & 1 4 @) F
(< 4 : % &

- **Assessment and instruction should be considered together** – performance on assessments can inform instruction and assessments can be specifically designed to provide students with opportunities to demonstrate what they've learned during instruction.
- When considering the level of knowledge represented while designing a test item, start with the outcome (target knowledge) in mind. Then consider what **foundational knowledge** the student needs and the **bridging knowledge** that will help the student acquire the **target knowledge** or skill.
